

chatpod
BY **IMPACT ACOUSTIC®**

manufactured in the heart of switzerland

Our chatpods are made to the highest Swiss quality standards and craftsmanship. Harnessing the power of nature, leaving nothing but clean water and air.

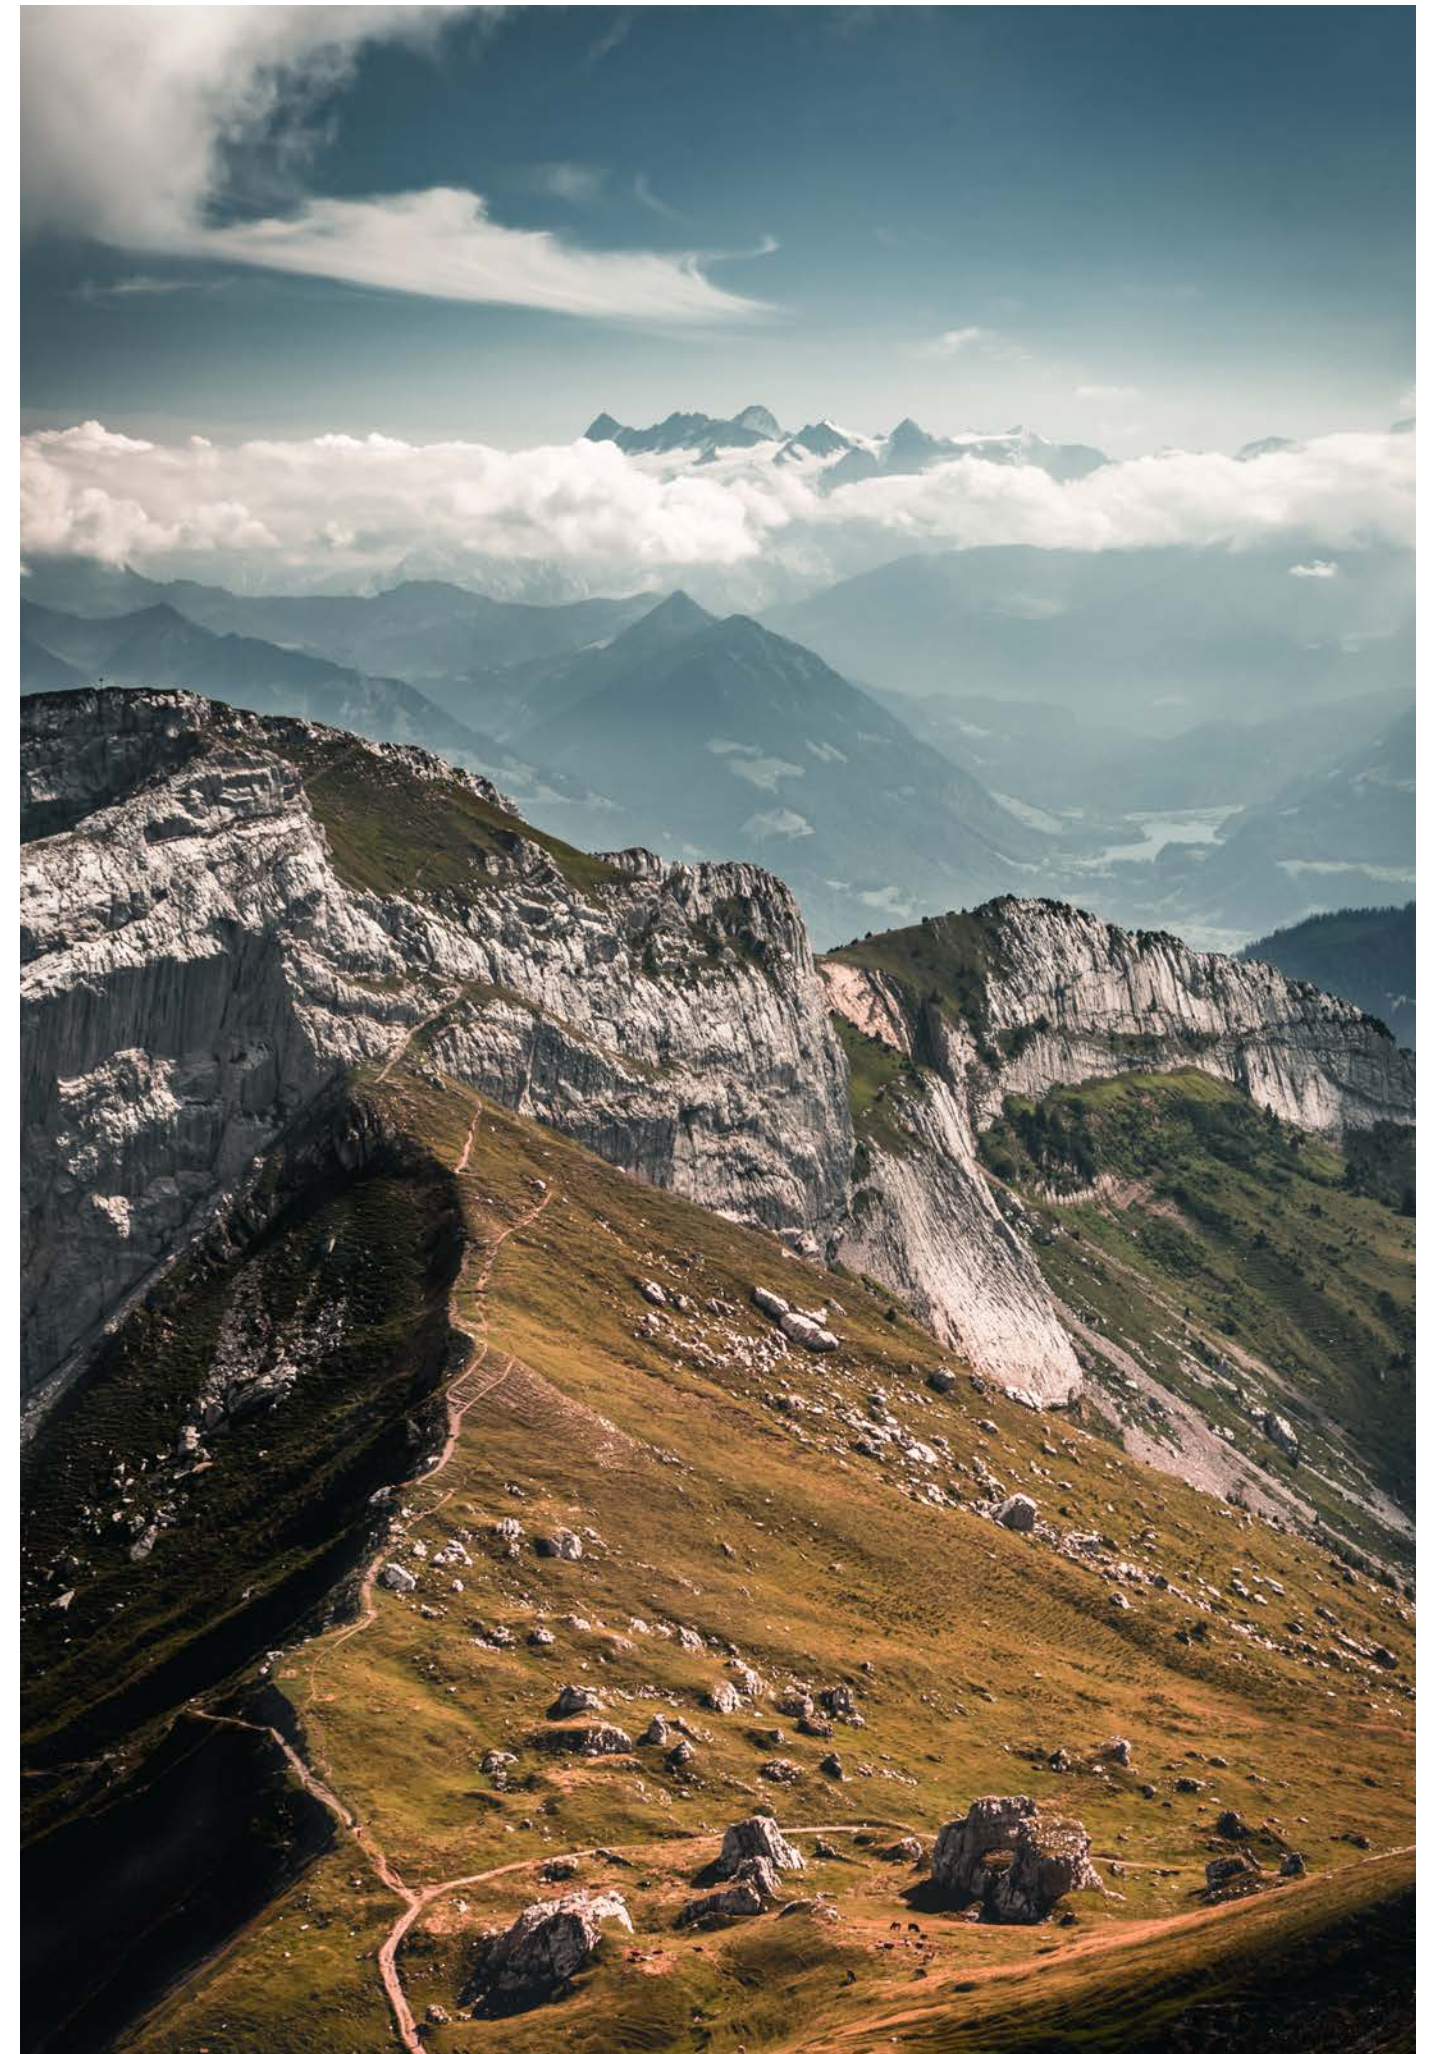

chatpod is a brand of Impact Acoustic, a renowned Swiss company for acoustic solutions.

Our room-in-room solutions and phone booths are driven by innovation for beautiful, yet functional design addressing today's environmental and social challenges. We strive to be the rebels who tirelessly think one step ahead to develop sustainable & high performance acoustic solutions for the design industry: permanent beta.

We specialize in turning single-used materials like PET bottles, tires or sawdust into high-quality finished products for acoustic comfort in office spaces all around the world.

We understand how Environmental Social Governance (ESG) in architecture and interior design matters to the new generation of international design practitioners. Giving them all the tools to address acoustic challenges while keeping sustainability in focus is our goal.

IMPACT ACOUSTIC®

chatpod benefits

Jeffrey Ibañez
Architect and founder

State of the art acoustics

We are experts in room acoustics. The inside of the chatpod is soundproof, while the outside reduces echoes, background noise and reverberation in the open office. So as a side effect, it also increases sound quality and well-being in the office environment.

Largest colour range

The chatpod's exterior matches your office environment with a carefully curated colour palette of 28 colours: Choose from carefully curated colours from our ARCHISONIC® collection.

Sustainable materials

We use 97% recycled materials such as cardboard, sawdust, rubber or recycled PET bottles to produce our meeting boxes. The chatpod can be fully recycled at the end of its life cycle.

Plug and play

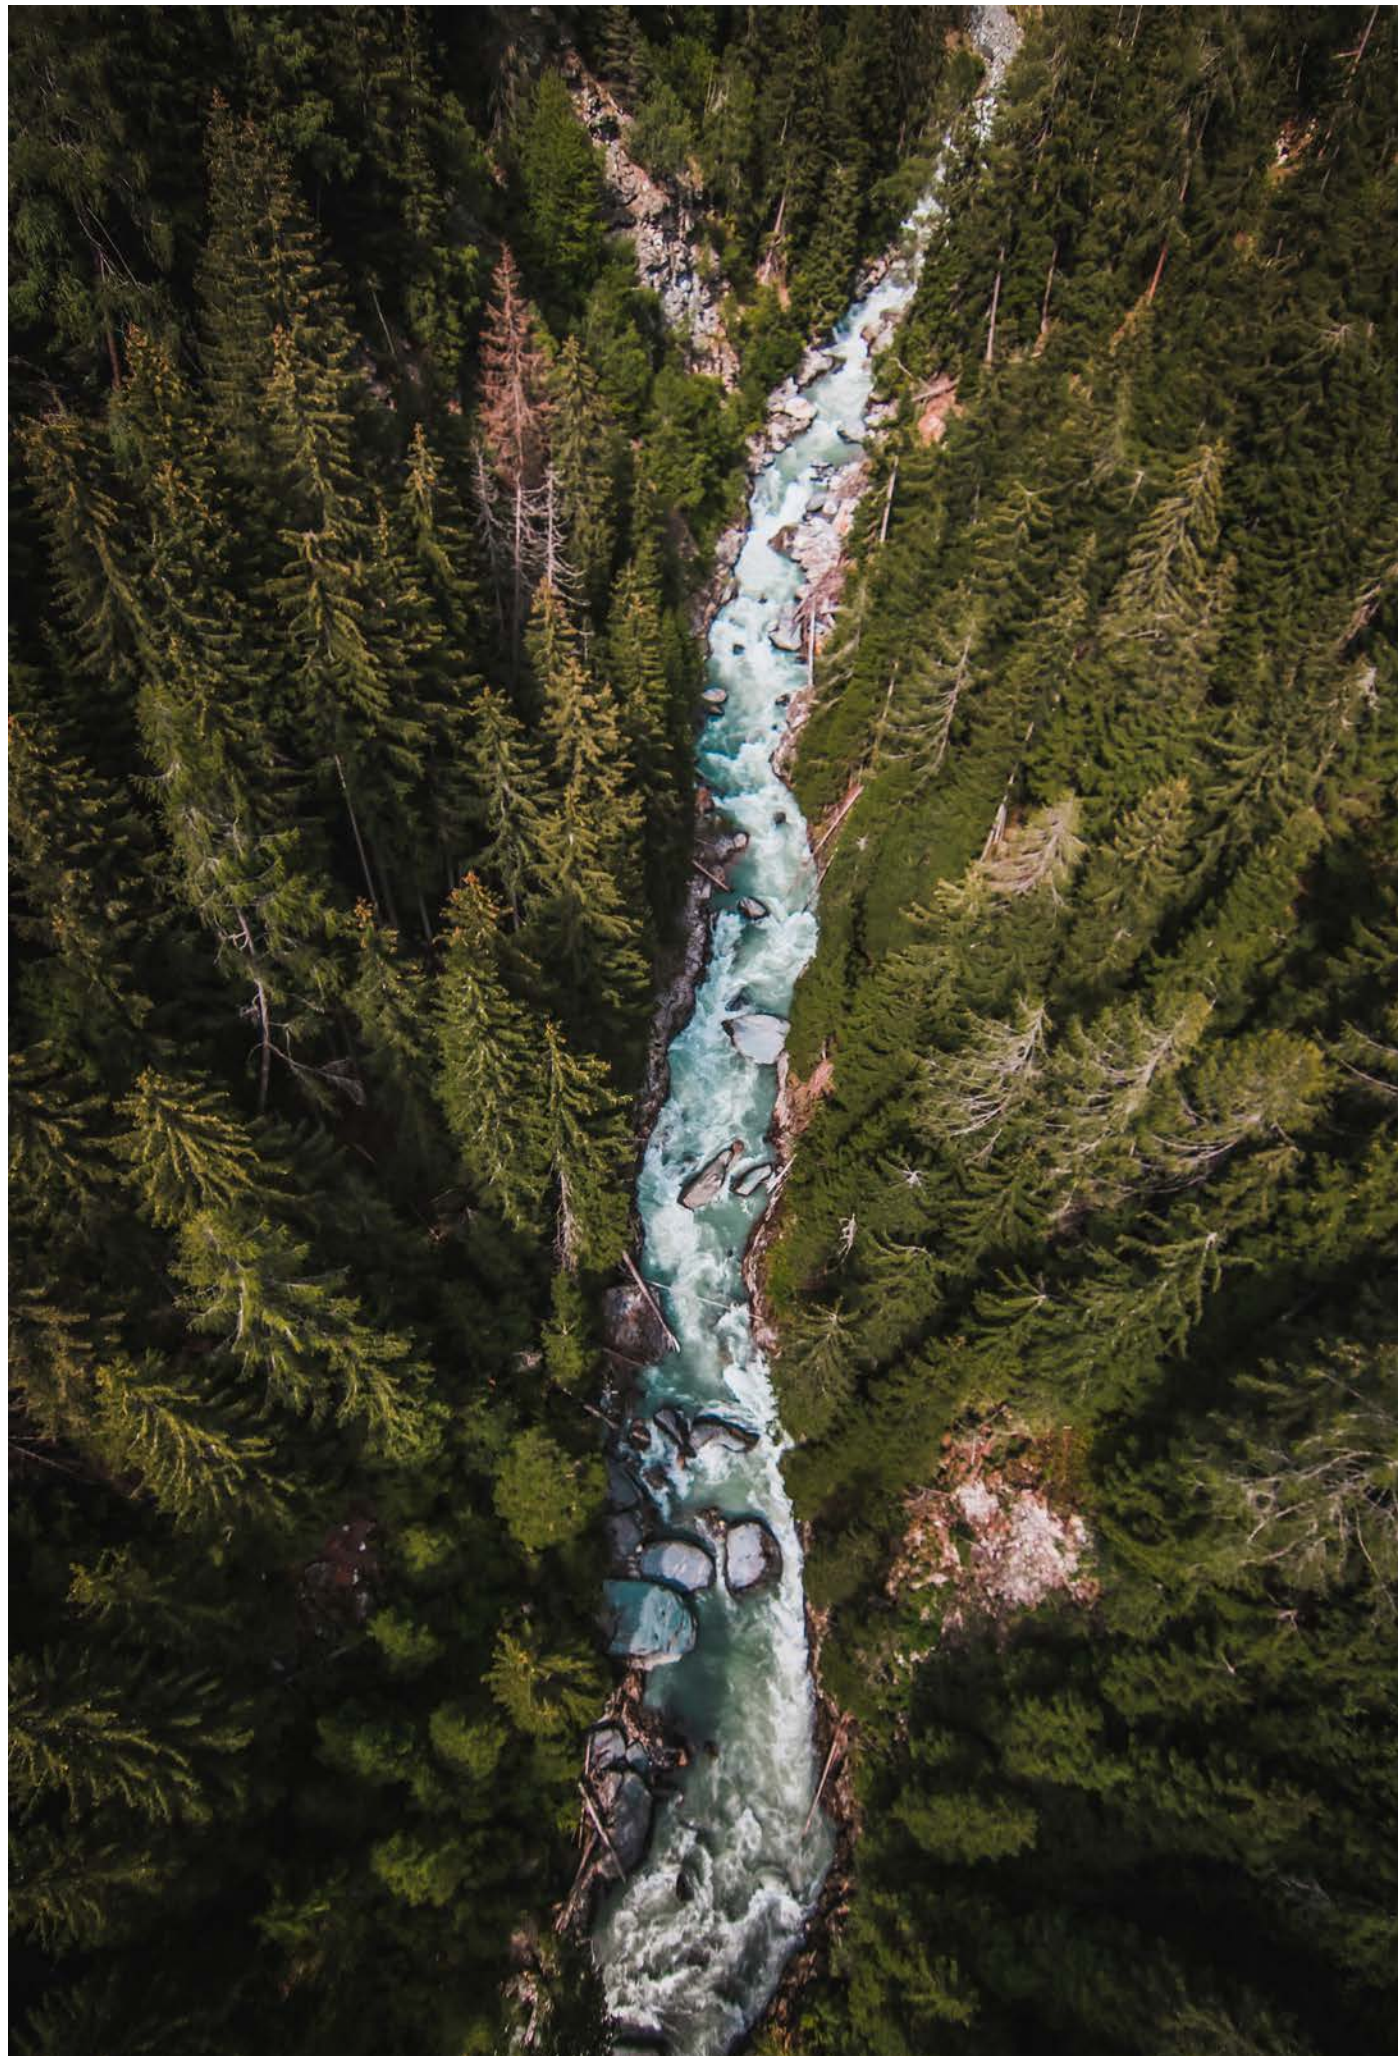

The components of the pods are delivered pre-assembled. On-site assembly can be carried out easily by facility management staff thanks to simple assembly instructions. The telephone booth can be installed in as little as 20 minutes.

Highest flexibility

The chatpod can be easily moved and reconfigured according to individual needs. Our booths can be easily expanded. In this way, a meeting box for two people becomes a meeting box for four people in just a few steps.

Made in Switzerland

All chatpods are manufactured in Switzerland with the highest quality standards. The production of individual parts takes place in cooperation with a workshop for handicapped people.

built from recycled materials

The chassis of our pods are made of several layers of super-light cardboard, which gives them its clean and timeless shape. A look that is further enhanced by a cladding of recycled PET bottles.

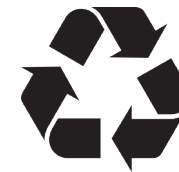

The same recycled PET bottles are also used for the felt-like interior finish, which provides chatpod guests with excellent acoustics and absorption of outside noise.

A frame made of processed sawdust makes the chatpod robust and reliable.

We recycle materials to build our pods and later recycle them again when they have reached the end of their life. Our entire plant is heated with production waste and our machines are powered by clean water energy.

The chatpod is manufactured and assembled in Switzerland in cooperation with a workshop for disabled people.

the future of the workplace comes in seven sizes

Our chatpod is a soundproof telephone booth or meeting room for calls and short meetings. Strategically designed with ergonomics, simplicity and sustainability in mind. The booth is available in seven sizes and eleven configurations to ensure a flexible set-up in any office space, no matter how small or large.

chatpod 185

Compact telephone booth with space for one standing person

chatpod 240

Pod for concentrated work for one person seated

chatpod 300

Concentrated work while sitting or standing thanks to height-adjustable table

chatpod 350

Box for targeted conversations between two people (seated)

chatpod 700

Flexible all-rounder for four people (standing or sitting)

chatpod 1050

Compact sitting or standing meeting box for up to six people

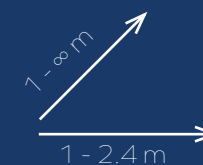

chatpod 1200

Pod with plenty of space for meetings for up to six people (seated or standing)

highest flexibility

The chatpod can be easily moved and reconfigured according to individual needs. The booths can be easily expanded in modules. A module can be individually configured and ordered from 1 to 2.4 metres wide. The depth of the pod can be extended endlessly. Thus, a meeting pod for two people becomes a meeting pod for four people in just a few steps, and even an extension of the large pod for six people is possible at any time.

unique features

The trend towards open workspaces brings with it a lot of challenges in an ever-changing world of work: Lack of privacy, constant interruptions and lack of supportive spaces for focused work are the most common setbacks of open work environments. Ultimately, this leads to reduced productivity of employees and teams.

To meet these demanding requirements and increase well-being and productivity in the office, our pods have unique and high quality features.

LED lighting system with focussed light beam exclusively designed by Bartenbach

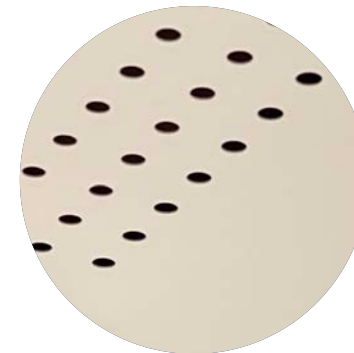

Built-in monitor for presentations*

Acoustic cladding made of certified Archisonic material, available in 28 colours

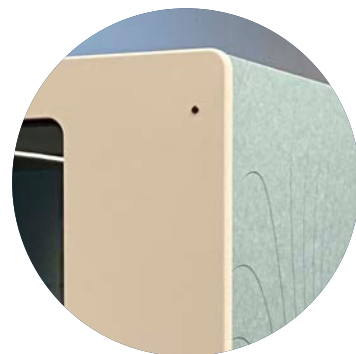

Tinted glass door and window for more privacy

Automatic ventilation system

Magnetic white board

Customisable frame colour from the ARCHISONIC® colour palette*.

Built-in tables and seats with flexible configuration for every work situation

Individual furnishing for even more options*

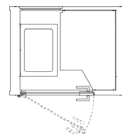

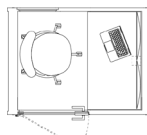

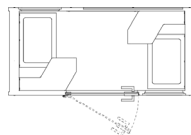

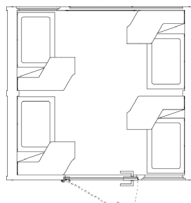

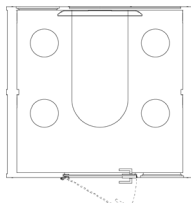

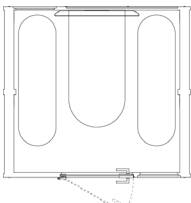

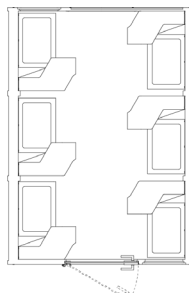

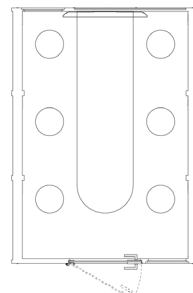

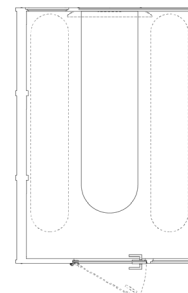

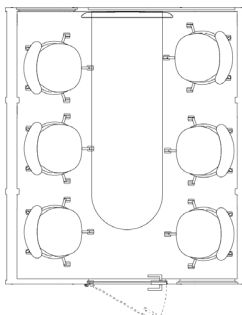

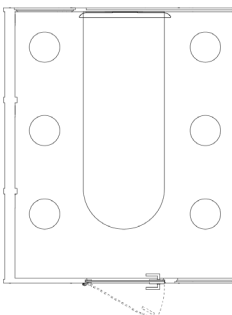

Built-in power socket and USB connection

* optionally available

room-in-room solution for every requirement

Our chatpod is not only available in seven different sizes, but can also be flexibly extended and individually designed.
Let yourself be inspired by the numerous possibilities.

top class sound insulation

As specialists in room acoustics, we know very well how to put noise on mute. Our pods are carefully designed and built to ensure the greatest possible sound insulation. Private conversations do not penetrate from the cabin to the outside and office noise is not perceptible inside. The perfect basis for a pleasant working atmosphere.

The additional acoustic cladding on the outside of the chatpod also improves the acoustics in the open-plan office.

Together with the Lucerne University of Applied Sciences and Arts (HSLU), we have scientifically tested our pods for sound insulation.

The speech level reduction is **28.4 dB** according to ISO23351-1, which allows the pods to be placed in the immediate vicinity of office workstations without conversations from the cabin being perceptible to the outside.

matching frame colour

As standard, the frames of our pods are manufactured in Natural Black or Impact White. Together with the colour consultants from Colour Hive, we have developed matching shades in the NCS colour system in addition to the ARCHISONIC® material. External cladding with wood veneer is also possible. In this way, we guarantee you maximum freedom in design and give you the opportunity to adapt the chatpods even better to the office environment, corporate colours or existing furniture.

ARCHISONIC® colour collection

ARCHISONIC® is an acoustic absorber made from recycled PET bottles.

We have worked with Colour Hive of London to develop a carefully curated colour palette consisting of eight colour families. These were created as a tool for designers and architects to express their design intent for each project.

soothing pastels 6 colours

elegant darks 5 colours

energetic brights 6 colours

primary play 5 colours

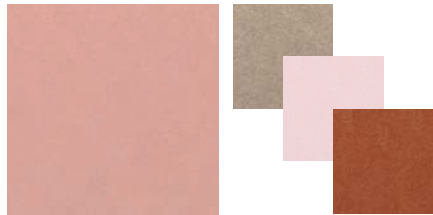

quiet neutrals 7 colours

the
good
plastic
company

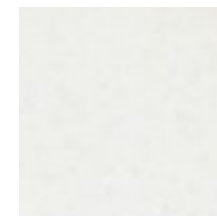

The Good Plastic Company is a Dutch organisation that aims to help solve the problem of the 400 million tonnes of plastic waste produced each year. Plastic waste pollutes our oceans and affects our food chain.

The organisation produces environmentally friendly table tops of recycled plastic of the highest quality. Each table is made from a single type of plastic so that it can be easily recycled. This extends their useful life indefinitely.

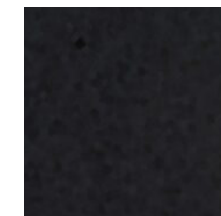

tabletops made from plastic waste

The table tops of our chatpods 700, 1050 and 1200 are optionally also available in the high-quality plastic material of The Good Plastic Company. The tops are made from 100% recycled plastic (for example, from used keyboards, computer mice or refrigerator doors) and are subsequently also completely recyclable.

individual interior and exterior cladding

Looking for an even more personal or individual touch for your chatpod? No problem! In addition to the versatile colour palette, we also offer you countless samples for acoustic exterior and interior cladding. Our design patterns based on parametric design, which we use for wall cladding and other high-performance acoustic products, are also available for your chatpod.

In addition to existing patterns, you also have the option of implementing your own design, for example a company logo.

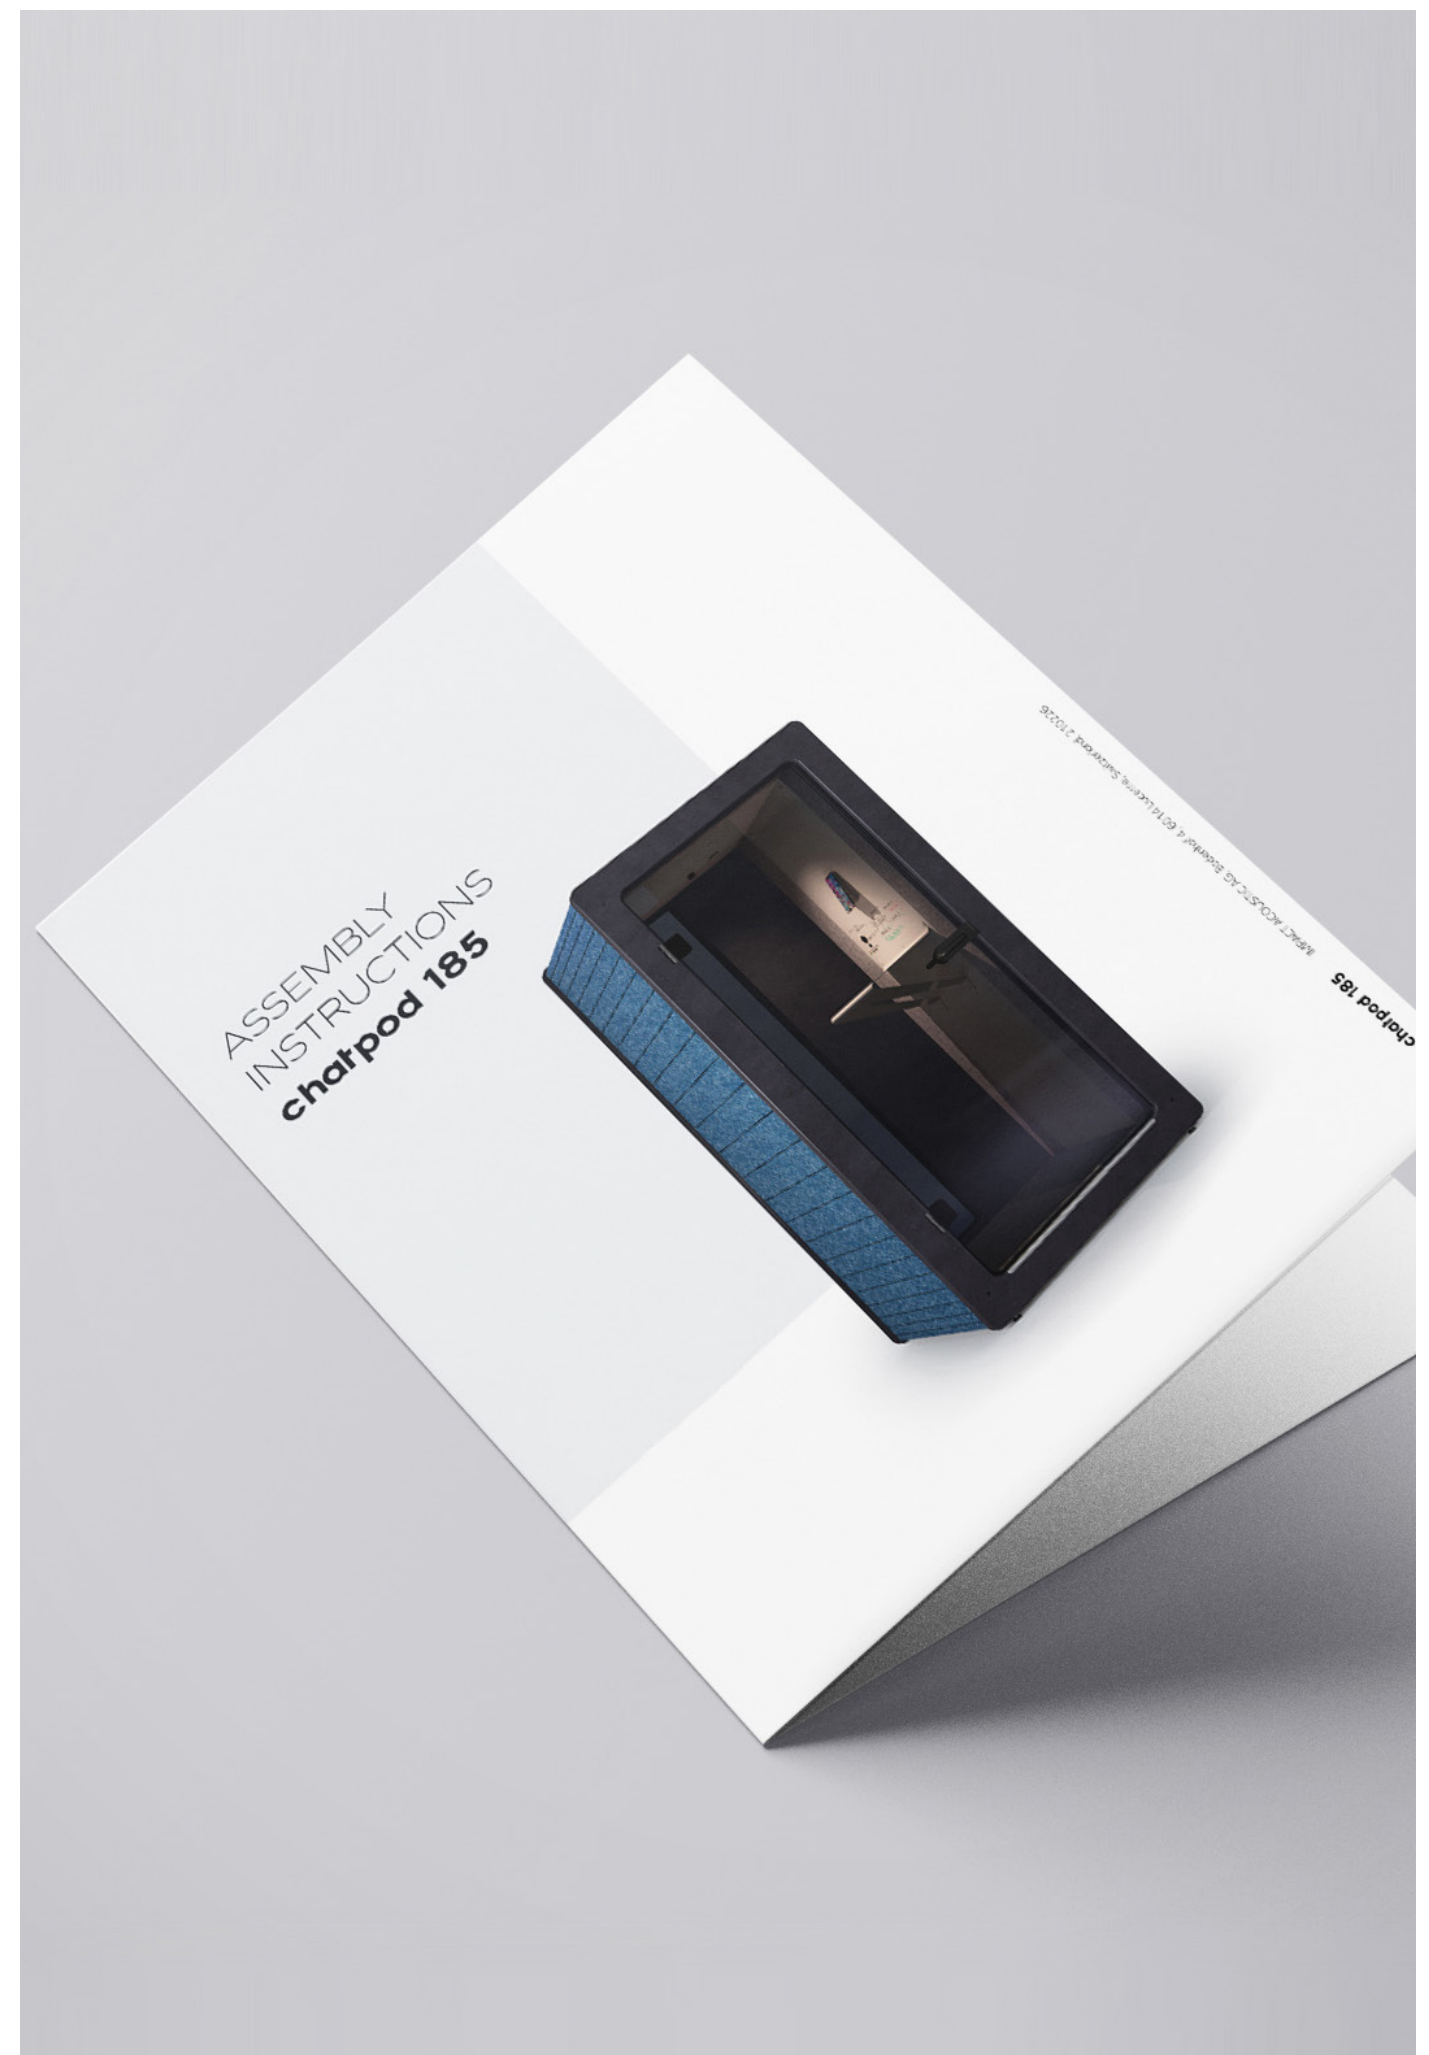

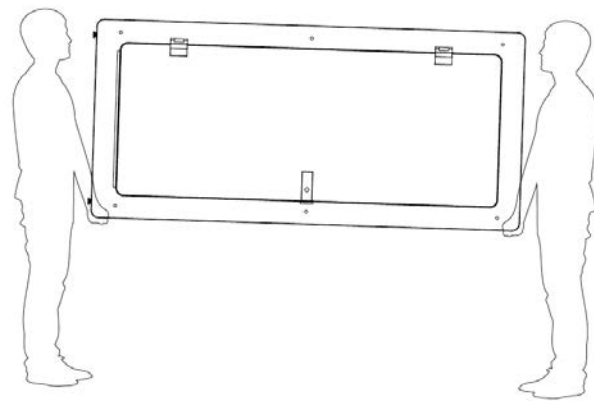

simple and quick assembly

All chatpods are supplied with easy-to-follow assembly instructions. The components of the pods are pre-assembled and ready-made before shipping. On-site assembly can easily be carried out by two members of the facility management staff or other persons with manual skills. All that is needed is a small ladder and a spirit level. The pods are easily plugged together directly in the office.

Each chatpod always consists of two side walls, a base and a lid.
The front and back give the chatpod the necessary stability.

The telephone booth (chatpod 185) can be assembled and ready for use in around 15 minutes.

quick disinfection without wiping

PET fibres do not provide a breeding ground for germs and therefore have antibacterial properties. The ARCHISONIC® material consists of through-dyed fibres that do not fade even when aggressive cleaning agents and disinfectants are used. Accordingly, not only alcohols or aldehydes, but also products with active chlorine are suitable for disinfecting the acoustic cladding of the chatpods.

Due to the strong odour of products containing chlorine, we recommend disinfectants with a fast-drying alcohol solution (75 %) for daily cleaning of the chatpods and disinfectants with a long-term effect (e.g. Pantasept disinfectant spray) for weekly cleaning.

On request, we offer Microban® antimicrobial protection, which prevents bacteria and fungi from thriving on our material.
