Overview

Explore the tactile luxury of our expertly crafted Wool Designer Felt collection. As our signature product, it goes beyond a textile and creates a sophisticated design statement.

Whether you prefer subtle greys and natural tones for a soft finish or vibrant, eye-catching colors, our Wool Designer Felt will surely beckon towards its understated luxury and timeless appeal.

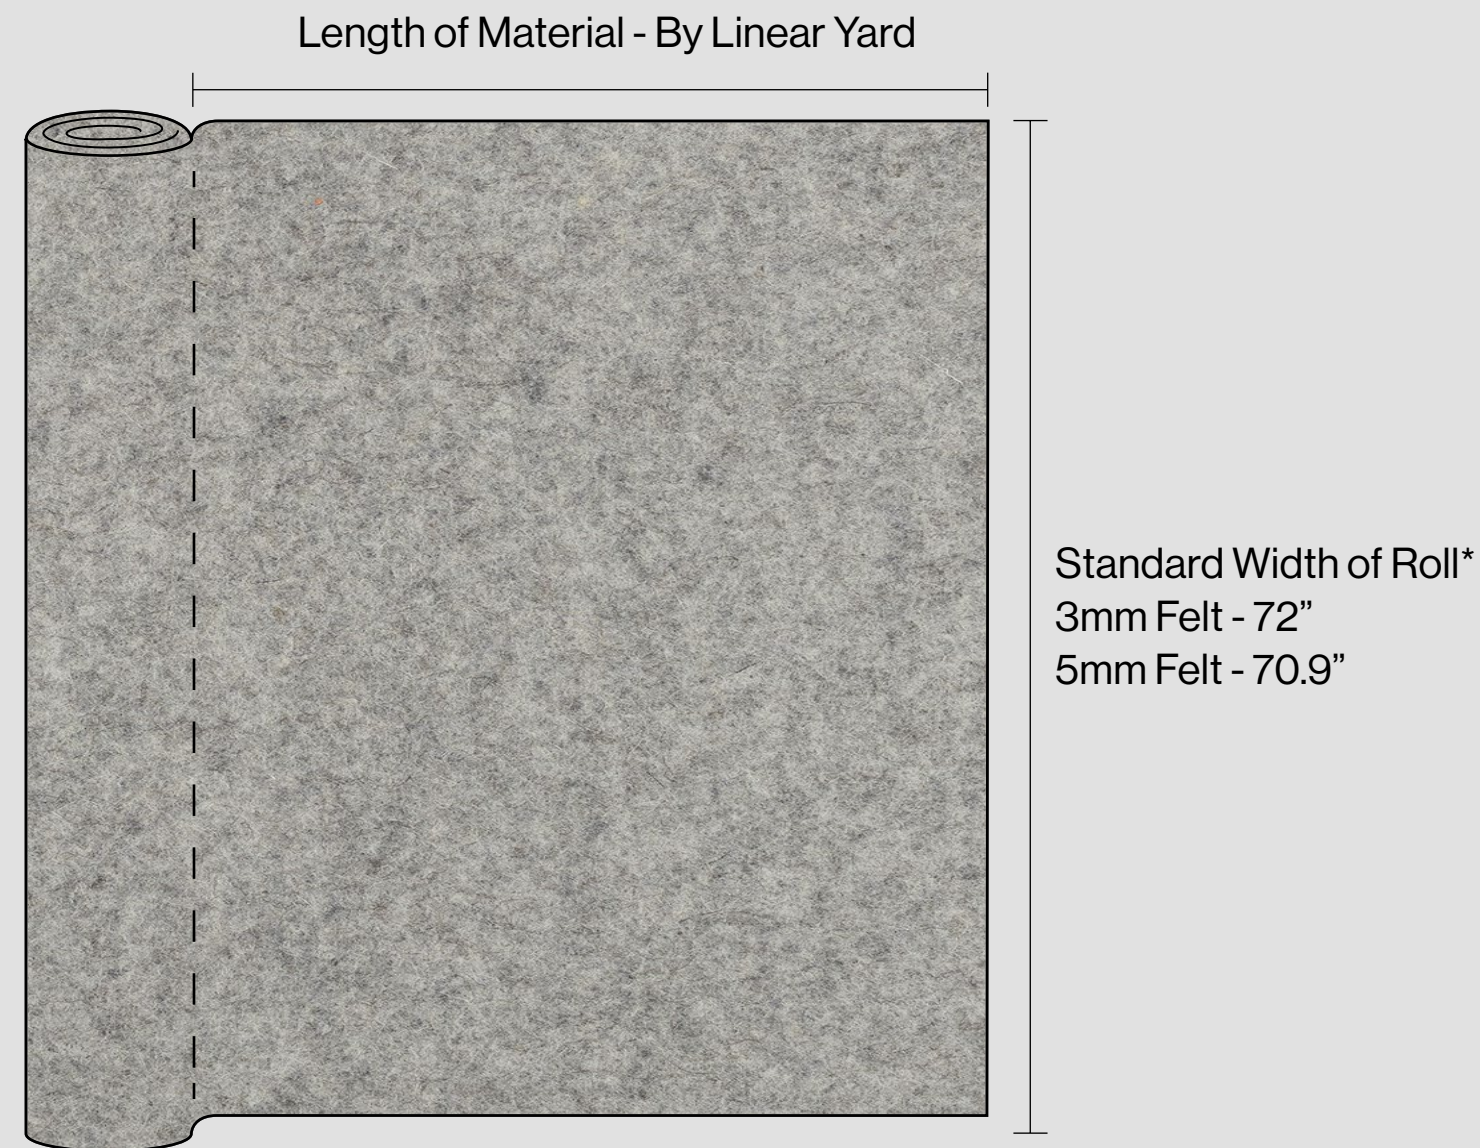

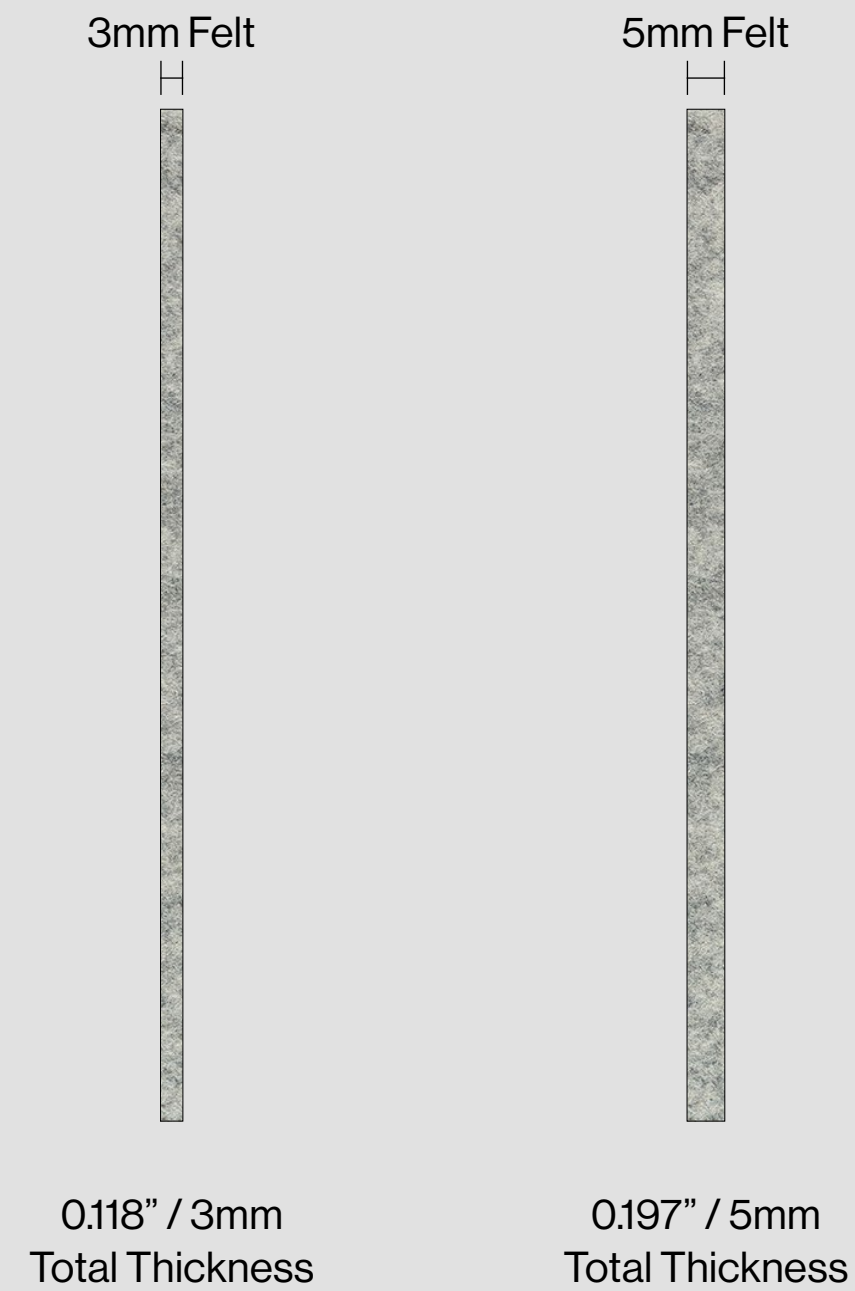

Dimensions & Details

Made of 100% wool and available in a wide selection of colors, our Wool Designer Felt comes in both 3mm and 5mm standard thicknesses to be used in a variety of design applications.

*All given measures are approximate.

Installation as a Wallcovering

As a non-woven textile, Wool Designer Felt will not fray when cut to size on-site, and when properly installed it can cover a large area with subtle seams, resulting in a beautifully consistent soft finish within your space.

General Recommendations

Standard Practice

Typically installed similar to wallpaper using vertical seams. The edges are trimmed to ensure a clean transition from edge-to-edge.

Factory Edges

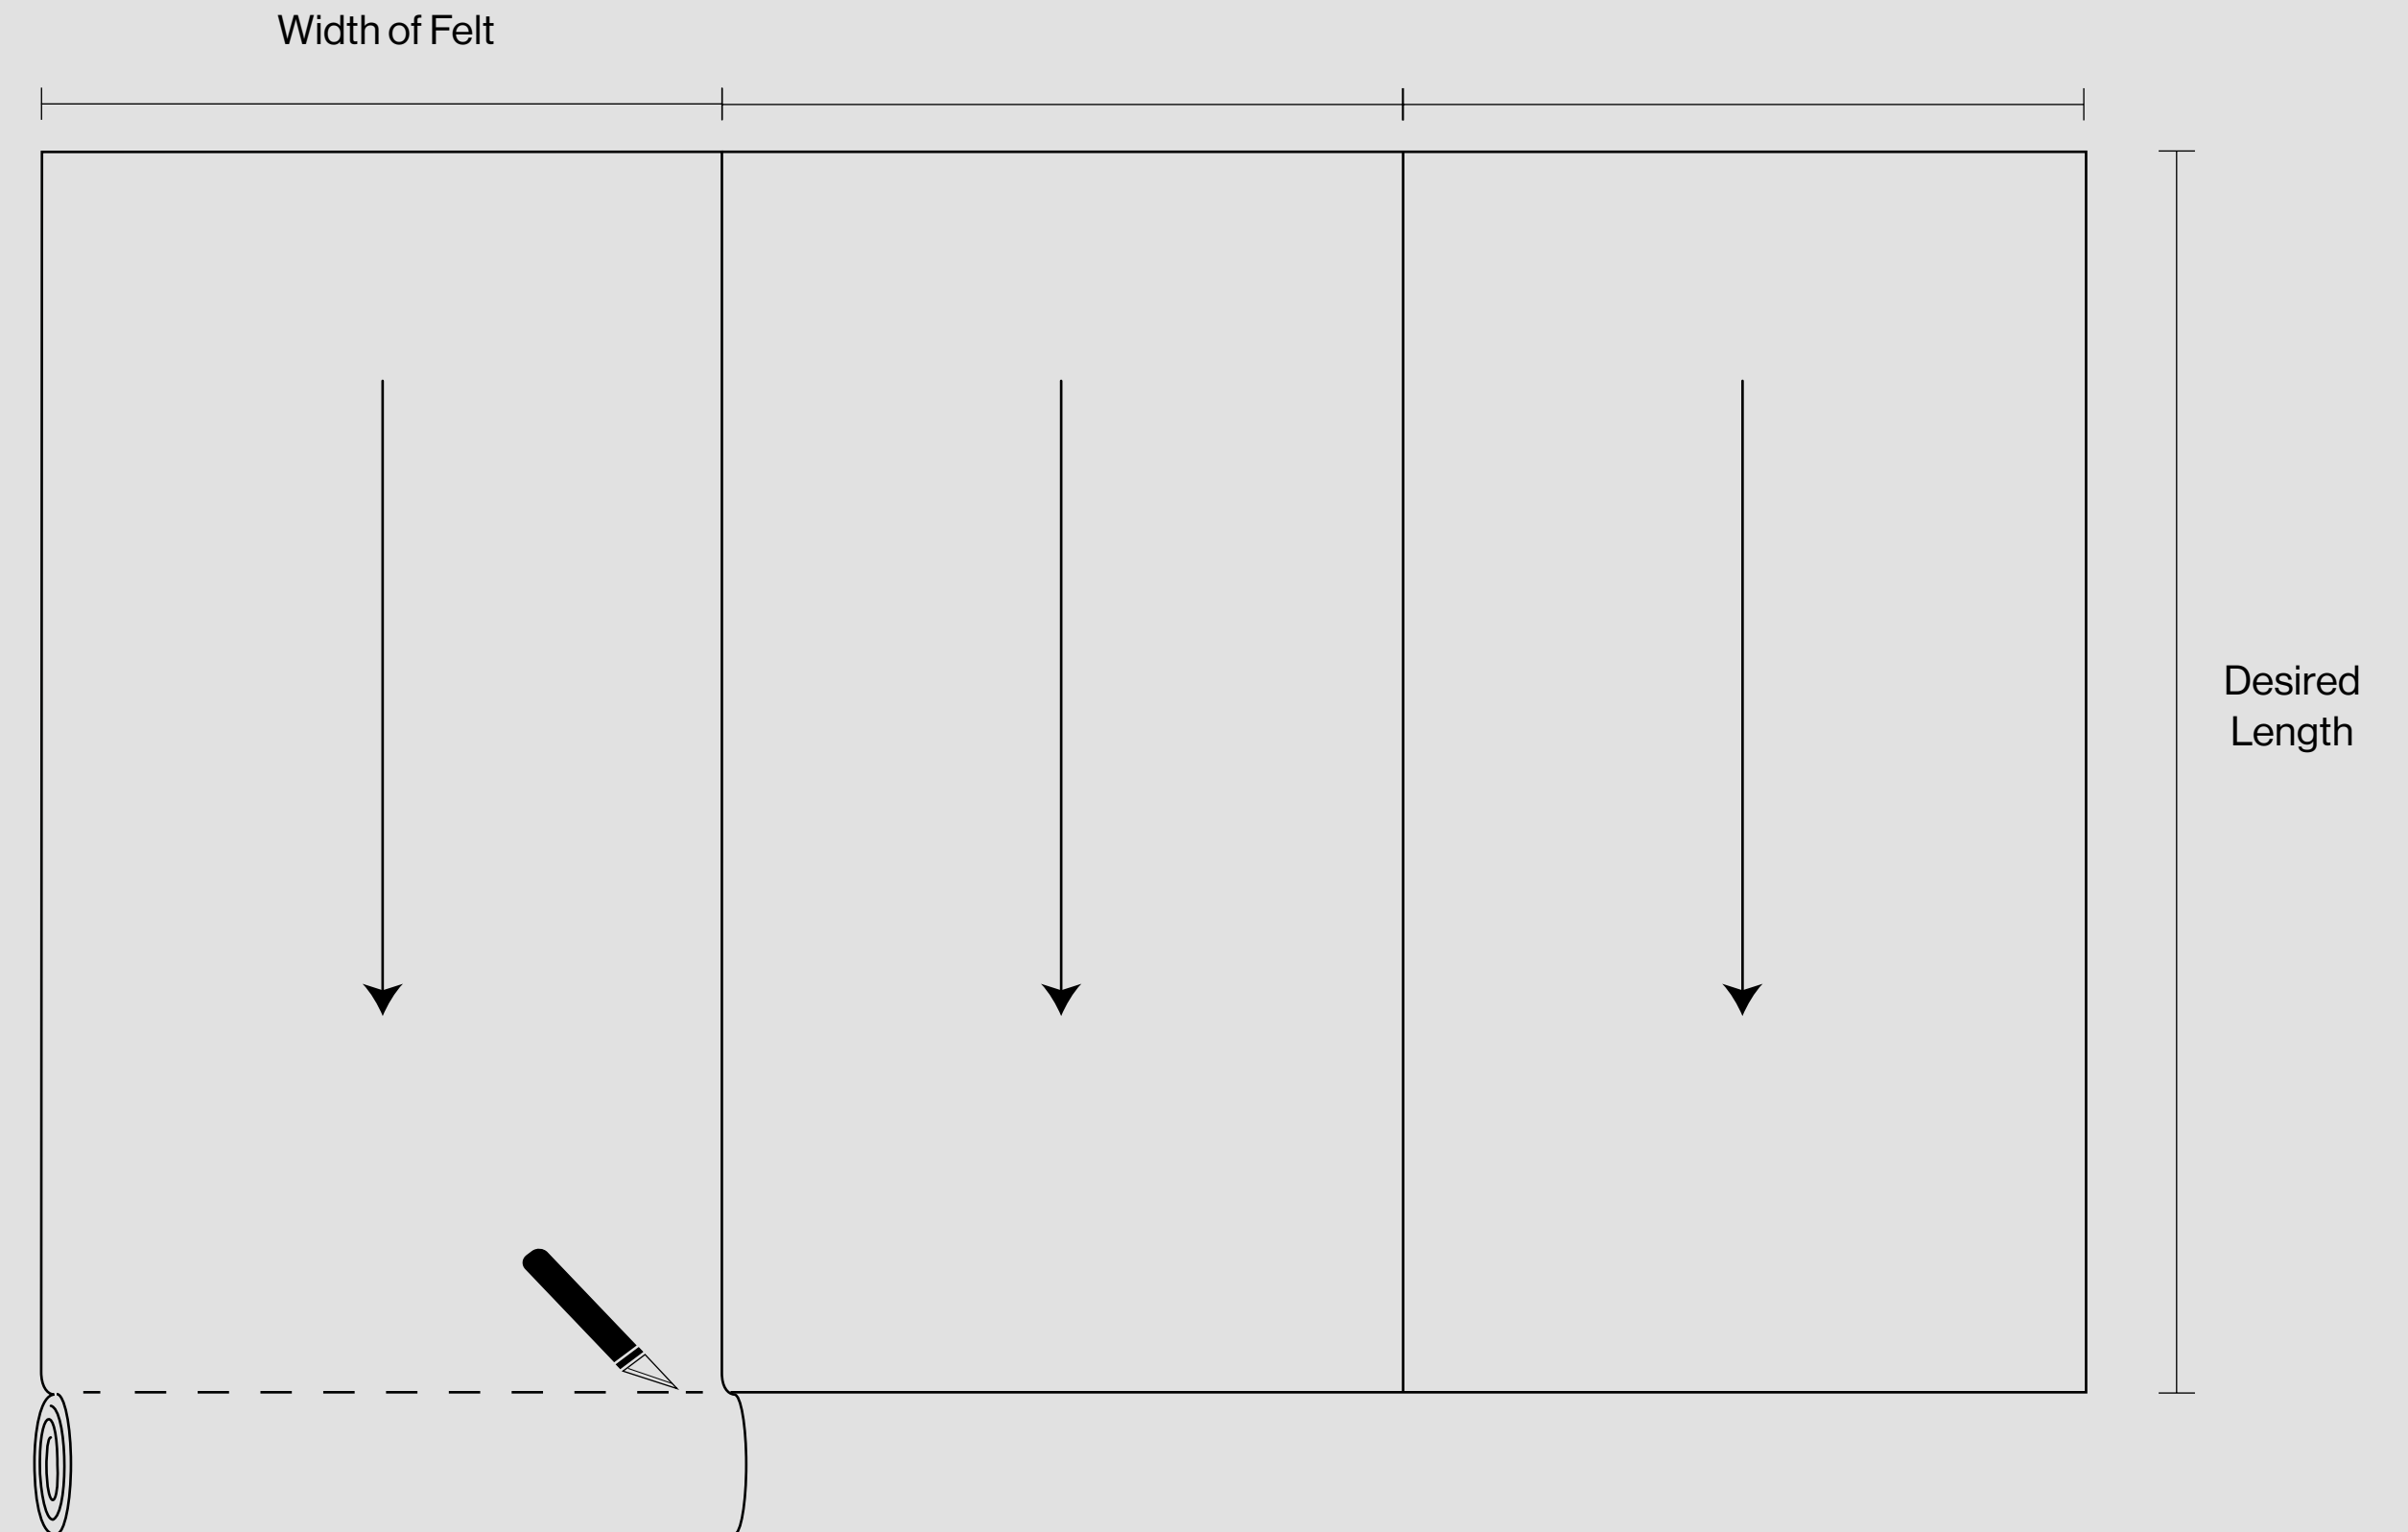

Note that factory edges may not be perfectly straight or square and may require trimming.

Orientation

Best to install in a consistent orientation off of the roll for higher color consistency.

Variation

With wool felt being a natural material there may be natural variation within the material. This may include rare colored dots known as Smit Marks, color variation due to the natural wool color variation and the absorption of dyes, or fine vegetable matter. Complete color consistency is not guaranteed nor can it be expected, however if particular areas of a project site require higher consistency please inform us well in advance and we can do our best to accommodate by supplying similar dye lots when possible.

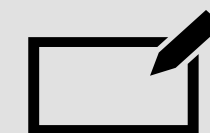

Colorfastness to Light

Class 4-5

Wool Designer Felt Specifications

Maintenance

Handle with care. To remove any accumulation of airborne particles, Interior Felt products can be occasionally vacuumed with an upholstery brush, brushed by hand or with a lint brush or roller. When dusting, it is normal to encounter a slight shedding of fibers. These loosened fibers are not a sign of any defect and will decrease over time.

Wet spills should be blotted up as soon as possible with a dry cloth. All wool fibers have a naturally-occurring fatty coating called lanolin. This substance makes wool water-repellent and provides inherent stain resistance. Felt is not waterproof, but its inherent resistance to liquids creates some delay time before spills soak through and cause a stain.

Other wet spills may be spot cleaned with warm water or a mild dry-cleaning solvent. Clean soiled areas gingerly to avoid warping the felted surface.

Helpful Tips:

We strongly recommend testing any cleaning method on spare material or less visible areas first.

In addition to occasional dusting, felt products may need to be vacuumed once per year.

If stains cannot be removed with spot cleaning, we recommend seeking professional dry cleaning services that have experience with wool.
